

NYASP is the professional organization representing school psychology in NYS.

NYASP exists to fulfill the following five purposes:

- *to serve the mental health needs of all children and youth.
- *to encourage and provide opportunities for the professional growth of members.
- *to actively promote the interests of school psychology.
- *to inform the public about the services and practice of school psychology.
- *to advance the standards of school psychology.

The following excerpt is from Gil Trachtman's article in 1984 Newsletter:

“The history of School Psychology in New York State is really three separate distinct histories, the history of upstate, the history of New York City and the history of metropolitan suburban Westchester and Nassau County. I spent the 50's and 60's as a school psychologist in Nassau County, but my life before and after that period was in New York City: Brooklyn in the 40's and before that, Manhattan.

As the sketchiest of overviews let me tell you that New York City began to license school psychologists independently of New York State in the 20's and New York State began to certify school psychologists in the 30's, and I think New York University probably had the earliest School Psychology program in the country. New York City is exempt from New York State Education Department Certification so New York City licenses its own personnel, usually with standards similar to or higher than the rest of the state and including licensing examinations developed by the New York City Board of Examiners. New York City also established the Bureau of Child Guidance attached to the city school system but separately funded with mental health not education money. The Bureau contained a staff of psychiatrists, psychologist and social workers and probably comprised the largest mental health clinic in the world long before Public Law 94-142. Now New York State has a strong commitment to special education through Boards of Cooperative Education serving suburban and rural districts which lacked their own programs and, with this, a long tradition of school psychologist employed throughout the state. The 50's were a period of great growth in our state but the growth took a different form in New York City, upstate New York and Nassau County where I began my career. Upstate developed a more educational and psycheducational model while New York City developed a more clinical model and Nassau County developed a clinical model but with greater room for diversity and exploration. It was my good fortune to participate in that exciting period.”

Contracting for psychological services was a compelling issue in NYS with NYASP opposing the practice and NASP favoring it. Frank Rhymer (Bureau of Psych Services, SED) hoped to lay the issue to rest with this opinion. "The arguments from the Friedman Decision regarding contracting for psychological services is that school psychological services is an instructional service and responsibility for instructional services cannot be contracted out to a third party by a local educational agency. Therefore the local educational agency must provide school psychological services directly."

Evelyn Goldwasser, Ph.D., edits a new publication, Clinical Scope, from the Special Education Division of the New York City Board of Education.

Gang of Four: Jack Kamins, Dirk Hightower, Arlene Crandall and Debra Handel made a presentation to the NYS Board of Regents in support of the New Compact for Learning: Special Education, Student Retention, Standardized Evaluation Procedures, School Psychology Certification and Psychological Evaluations. Legislation referred to as Mandate Relief threatened the jobs of NYS school psychologist. As a result of the governor’s reduction in the state budget of 240 million dollars in aid to education, school districts sought relief by reducing the duties of school psychologists.

1. It was proposed the school psychologist would be a sitting member of the CSE, by invitation only (similar to the way physicians are utilized)
2. It was proposed that the determination for the need for a psychological be determined by the CSE (minus a full-time school psychologist).
3. It was proposed that two member building subcommittees be established making CSE decisions throughout New York State (these subcommittees would consist of the child’s teacher and a supervisor of special education).
4. It was proposed that the mandate relief efforts outlined would save approximately \$36,000,000. The reality was that the only way these savings could occur would be through the elimination of about 900 school psychology positions, statewide.

As a result of NYASP’s actions:

1. The school psychologist remains as a permanent member of the CSE.

2. The school psychologist determines the need for and extent of psychological assessments.
3. Two-member building level subcommittees are limited to the “Big Five” cities in New York State. In addition, the involvement of the school psychologist is mandated anytime there is new psychological data and whenever there is a consideration of a change to a more restrictive program option (as defined in present regulations).
4. School psychology positions will not be disproportionately impacted in light of present budgetary reductions.

BOCES take-over of district school psychologists positions challenged. NYASP adopts NASP’s Position Statement: Children with Attention Deficits. Establishment of Job Information Network to assist school psychologist in finding positions in NYS.

Another threat to the role of pupil personnel workers was the influx of non-school based “counselors” funded by grants to combat drugs. NYASP decided to join school counselors in filing an appeal with the Commissioner of Education about the growing concern across NY state regarding the manner in which drug counselors, youth at risk counselors and community counselors work in school systems. As the number of grants increased the number of counselors increased. Questions about the qualifications of some counselors and the supervision under which they functioned arose. The school counselors appealed the Commissioner’s regulations which delineated the professionals allowed to work in schools. Counselors and school psychologist held that certified school psychologists, certified social workers or certified school counselors were the appropriately trained professionals to work in schools.
